

# Abdul Hadi

## Software Engineer · Full-Stack & Computer Vision

Multan, Pakistan | +92 300 6341150 | anhadisk11@gmail.com | linkedin.com/in/abdul-hadi-72b190201 | github.com/ABDULHADI089

### PROFILE

Software engineer with hands-on experience across full-stack web and mobile development (Next.js, React Native/Expo, Node.js, NestJS, Supabase/PostgreSQL) and applied AI/computer vision (TensorFlow, Keras, OpenCV, PyTorch). Currently building production applications at DevNodes, with prior experience delivering an ERP system and a real-time facial recognition attendance system at Intermarket Knit, and AI model development at Heapware Technologies. Strong foundation in C++, data structures and algorithms, with a track record of shipping monorepo-based products end to end.

### EXPERIENCE

#### Software Engineer / Web Developer **DevNodes**

Present

- Build full-stack web and mobile applications using Next.js, React Native (Expo), Node.js, NestJS and Supabase/PostgreSQL.
- Developed TrekTrain, a commuter rail booking platform for the South African market.
- Architected a NestJS + Drizzle ORM backend monorepo with Zod validation, containerized with Docker.
- Work within Turborepo monorepos that combine a Next.js web app and an Expo mobile app on a shared backend.
- Delivered Pakistan Electric POS, a cloud-based multi-user EPOS system for an electronics retail store.

#### Software Developer **Intermarket Knit Pvt., Lahore**

Mar 2025 - Nov 2025

- Led full-stack development and deployment of a comprehensive ERP system integrating Finance, HR and Inventory to centralize operations and improve data integrity.
- Designed and implemented a high-accuracy, real-time facial recognition attendance system, replacing legacy methods with instant, touchless employee time tracking.
- Integrated the attendance system with the ERP's HR and payroll modules, automating reconciliation and eliminating manual payroll errors.
- Engineered scalable SQL database structures and high-performance queries supporting large volumes of transactional data and real-time reporting.
- Collaborated with HR and Finance department heads on requirement analysis and User Acceptance Testing (UAT).

#### AI Engineer **Heapware Technologies, Lahore**

Jun 2023 - Mar 2024

- Developed and implemented AI models for a range of applications as part of the AI engineering team.
- Enhanced existing AI solutions and integrated new features into production pipelines.
- Collaborated with the development team to ensure seamless deployment of AI models.

### SELECTED PROJECTS

#### Smart Cric — OpenCV, PyTorch, Expo, Next.js, Turborepo

AI umpire for street/tape-ball cricket: real-time ball tracking and umpiring decisions from a phone camera, with a live scoreboard. Expanding into a Turborepo monorepo (Next.js web + Expo mobile) with live score API integration.

#### Facial Attendance System — TensorFlow, OpenCV, Python, SQL

Computer-vision staff attendance for a knitwear factory floor, feeding directly into the ERP's HR and payroll modules so the register reconciles itself.

**TrekTrain** — Next.js, Node.js, PostgreSQL  
Commuter rail booking platform for the South African market — schedules, seat selection and ticketing for daily riders.

**Pakistan Electric POS** — Next.js, Supabase, TypeScript  
Cloud-based, multi-user EPOS running an electronics retail store: inventory, billing and multi-terminal sync.

**Household Staff Work Manager** — Turborepo, Expo, Supabase  
Turborepo monorepo pairing a Next.js dashboard with an Expo mobile app on a shared Supabase backend.

**Emotion Checker** — Keras, OpenCV, Python  
Deep-learning classification of human emotion from facial expressions, with a visualization layer that makes predictions legible.
